

IVC FILTER

WHAT TO EXPECT WHEN YOU ARRIVE:

All patients must register at the Outpatient Registration desk one hour prior to the procedure. You will have an IV started and blood work done prior to your procedure. The Interventional Team will explain the procedure in detail and answer any questions you may have regarding the procedure. You may have an "Intravenous Catheter" (IV) placed after you arrive. You may receive medicines in your IV to relax you and diminish any discomfort, in addition to a local anesthetic.

HOW TO PREPARE FOR YOUR PROCEDURE:

All patients are to have NOTHING to eat after midnight the night before the procedure. You must have a referring physicians order. If you are allergic to any medications, foods, or skin preparations soaps/agents, please inform the IR staff or your nurse. However, if you are allergic to "iodinated intravenous contrast" or "IV Dye" you will need to discuss this with your referring physician before he/she orders the procedure or test. If you are on BLOOD PRESSURE medicine you may take it with a sip of water. Bring a list of your medications with you, including inhalers if you use them.

If you are diabetic and take oral diabetic medicine and/or insulin, DO NOT take the morning of your procedure. The procedure you are scheduled for requires you to be NPO (having nothing to eat or drink) after midnight. Typically you will be able to eat just after your procedure. You will return to your room in the Outpatient Department, where your family can be with you during the recovery time.

If you take blood thinners, you will need to contact your Primary Care Physician for permission to discontinue any of these medications prior to your procedure.

Then follow these instructions:

Aggrenox, Coumadin, Plavix, Persantine, or aspirin, stop taking 5 days prior to your procedure.

Lovenox, Pradaxa, stop taking the day before your procedure.

We will make every attempt to start your procedure on time; however, due to emergencies and unpredictable changes in other procedures, we are sometimes delayed. We appreciate your patience and thank you ahead of time.

RECOVERY/HOME:

Your recovery time will be 1-3 hours in the Outpatient Recovery area. If you receive sedation you will need an escort to drive you home or have arrangements or someone to pick you up. You will Not be discharged without an escort. We will provide you discharge instructions prior to discharge. Please contact your Primary Care Physician after the procedure about restarting your medications, and when your blood tests should be taken.
