

NERVE BLOCK (NRB)

WHAT TO EXPECT WHEN YOU ARRIVE:

All patients must register at the Outpatient Registration desk 30 minutes prior to the procedure. NO blood work (labs) is required before procedures, unless on blood thinners. This may be done prior to the procedure if needed. The Interventional Team will explain the procedure in detail and answer any questions you may have regarding the procedure. You may have an "Intravenous Catheter" (IV) placed after you arrive. You may have a local anesthetic (numbing medicine) to diminish any discomfort.

HOW TO PREPARE FOR YOUR PROCEDURE:

All patients are to have NOTHING to eat after midnight the night before the procedure. You must have a referring physicians order. If you are allergic to any medications, foods, or skin preparations soaps/agents, please inform the IR staff or your nurse. However, if you are allergic to "iodinated intravenous contrast" or "IV Dye" you may need to discuss this with your referring physician before he/she orders the procedure or test. If you are on BLOOD PRESSURE medicine you may take it with a sip of water. Bring a list of your medications with you, including inhalers if you use them.

If you are diabetic and take oral diabetic medicine and/or insulin, DO NOT take the morning of your procedure. The procedure you are scheduled for requires you to be NPO (having nothing to eat or drink) after midnight. Typically you will be able to eat 2-3 hours after the procedure when the sedation has worn off.

If you take blood thinners, such as, Coumadin, Plavix, Aspirin or Lovenox, you will need to contact your Primary Care Physician for permission to discontinue any of these medications prior to your procedure.

RECOVERY/HOME

Your recovery time may be 1-3 hours in our recovery area. We will provide discharge instructions prior to discharge. Please contact your Primary Care Physician after the procedure about restarting your medications, and when your blood tests should be taken.
